Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: http://www.uspto.gov/main/howtofees.htm.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

camera comprising a first automatic gain control auxiliary amplifying circuit (m₁) having a low

amplification degree and a high signal to noise ratio, a second separate automatic gain control

auxiliary amplifying circuit (m₂) having a high amplification degree and a low signal to noise

ratio, a detector for detecting a change of object illumination, and a switch activated by said

detector for switching from said first auxiliary amplifying circuit (m₁) to said separated auxiliary

amplifying circuit (m2) when said object illumination produces a signal to noise ratio that is less than the minimum signal to noise ratio of said first auxiliary amplifying circuit (m₁), whereby said CCD camera is switched to said separate auxiliary amplifying circuit (m2) when ambient illumination of said subject is extreme low to substantially broadening the range of light levels suitable for photographs by said CCD camera.
